

Customer Update

May 2009

Darrell Metzger named VP Sales & Marketing

Darrell Metzger has been named Vice President of Sales & Marketing for Jarvis.

He most recently served as Global Sales Manager for the Shepherd Caster Company.

While at Shepherd, Darrell

served as Regional Sales Manager, Product Manager and Global Accounts Manager.

He holds a Bachelor of Applied Science degree from Siena Heights University in Michigan.

New "E-Flex" Wheels offer Performance at a Competitive Price

New Jarvis "E-Flex" wheels feature a soft, cushion ride combined with the load capacity and rolling ease of a hard tread wheel.

These economical new wheels are made in the USA in 6" x 2" sizes in both flat tread and round tread designs.

Because of their thermoplastic construction, they are well suited to wet or wash down conditions.

If you would like a quote or samples of the wheels, please contact your Jarvis representative.

More sizes will be announced soon.

Did you know . . .

- That Europe has no deserts – it is the only continent without one.
- That Jarvis offers more caster finishes and plating than anyone in the business – zinc, chrome, nickel, black phosphate, black powder coat, grey polane, yellow chromate and bright brass.
- That Hershey's "Kisses" are called that because the machine that makes them looks like it's kissing the conveyor belt.
- That Jarvis offers two Series of Plastic Casters: 50 MG "Futura" casters and 50 HN "Infinity" casters.
- Armored knights raised their visors to identify themselves when they rode past their king. This custom has become the modern military salute.
- That Jarvis Solid Elastomer wheels are recommended for pushing heavy loads with minimum effort.
- That natural gas has no odor. The smell is added artificially so that leaks can be detected.
- That Jarvis offers an extensive line of both grey and black bumpers to protect equipment.

Weird casters are our thing . . .

No one else in the industry offers more special caster mounting stems and top plates than Jarvis.

The example shown here actually combines a top plate mount with two grip ring stems.

Our customer in Europe wanted a caster that would hook his carts together, so we created this design that met their needs.
